

LINDSAY WHIPPLE

Boston, MA • lindsaymwhipple@gmail.com • (413) 561-6827 • [Portfolio](#) • [LinkedIn](#)

Data professional with 3+ years in cybersecurity risk and compliance analytics, export control classification, third-party risk scoring, and breach impact analysis. Skilled at building ML and statistical modeling to bring data-driven rigor to security operations. Proficient in Python, R, and SQL, translating open-ended questions into rigorous, data-driven analysis.

EDUCATION

M.S. Applied Data Analytics — AI & Machine Learning Concentration

Expected May 2027

Boston University • Relevant Coursework: Data Science with Python, Machine Learning, Data Structures & Algorithms, Database Design, Web Mining & Graph Analytics

B.S. Statistics & Psychology

April 2021

St. Lawrence University • Canton, NY

PROFESSIONAL EXPERIENCE

Project Coordinator — Enterprise Services Risk & Global Trade Compliance

May 2026 – Present

Capital One

- Classified applications within an 11,000+ item pipeline to determine EAR export control requirements and mitigate third-party regulatory risk.
- Partnered with cross-functional stakeholders, including engineering leads and external vendors, to gather technical documentation supporting accurate compliance determinations.

Bitsight Technologies

Jul 2021 – Sep 2024

Data Breach Analyst • Technical Research Analyst — Quality Assurance • Technical Research Analyst • Boston, MA

- Analyzed and attributed data breach incidents across industries, calculating weighted impact scores across breach type, data sensitivity, and exposure scope that directly fed customer-facing third-party vendor risk ratings.
- Conducted quality assurance reviews of company profiles, IP infrastructure, and corporate hierarchies using rule-based validation checks, collaborating with globally distributed teams in the U.S. and Portugal.
- Researched and mapped company profiles, IP infrastructure, CIDR data, and corporate hierarchies to build structured datasets feeding Bitsight's proprietary cybersecurity scoring model.

PROJECTS

U.S. Healthcare Data Breach Analytics • Python, scikit-learn, Tableau

[View Project](#)

- Analyzed 6,800+ HHS-reported breaches (2010–2025) with pandas and SciPy — chi-square, Mann-Whitney U, and proportion z-tests — showing the 10 largest breaches drove 26% of 675M+ individuals affected.
- Built an end-to-end ML pipeline: engineered state-level features, trained a Random Forest severity classifier, surfaced catastrophic outliers via Isolation Forest, clustered state risk profiles with K-Means, and forecast annual breach volume.

Gender Equity in Collegiate Athletics — Statistical Analysis • R, tidyverse, emmeans

[View Project](#)

- Engineered an analysis-ready dataset from 2,000+ institutions' federal EADA filings, deriving participation ratios, per-athlete spending, and a funding-alignment index to answer seven open-ended equity questions.
- Applied one- and two-way ANOVA with interactions, Tukey HSD and emmeans post-hoc tests, and linear and logistic regression — finding women's spending scales ~3x faster per athlete ($R^2 = 0.38$ vs. 0.23) and large schools have 5x higher odds of offering more women's sports.

Every Throw Counts — Monte Carlo Scouting Simulation • R, ggplot2

[View Project](#)

- Built a Monte Carlo simulation in R modeling javelin competition outcomes, simulating thousands of scenarios to compare athletes on risk-adjusted expected performance rather than personal bests.

SKILLS

Languages & Tools: Python (pandas, NumPy, scikit-learn, SciPy, statsmodels, matplotlib, seaborn) • R (Shiny, ggplot2, tidyverse) • SQL (Oracle, DBeaver) • Tableau

Competencies: Machine Learning • Statistical Modeling & Experimental Design • Risk Assessment • Data Visualization • Cross-functional Communication

OTHER WORK EXPERIENCE

Server

March 2025 – May 2026

Hospitality Industry • Boston, MA • Full-Time

- Communicated across teams to ensure order accuracy, timing, and customer satisfaction in a high-volume environment.
